DIGITAL LITERACY PROJECT REPORT

Name: Palak
Branch: CSE CORE
Year: First Year
Course Code: CSE000

Introduction

Digital literacy is an essential skill in today's technology-driven world. It refers to the ability to use digital tools effectively, communicate responsibly online, and maintain a professional digital presence. This project aims to develop these skills by completing practical tasks related to digital communication, cybersecurity awareness, and professional portfolio creation.

As a first-year Computer Science student, learning digital literacy is important for academic growth and future career opportunities. Through this project, I explored different digital platforms, created professional profiles, and learned about safe and responsible internet usage. These tasks helped me improve my understanding of digital tools and their importance in modern education and professional environments.

Task 1: Infographic Creation

For Task 1, I created a digital literacy infographic using Canva. The infographic focused on important aspects of digital literacy such as safe internet usage, email etiquette, digital tools, and cyber safety.

The infographic included the following sections:

- Safe Internet Practices
- Email Etiquette
- Digital Tools for Students
- Cyber Safety Tips

Creating the infographic helped me understand how to present information visually. It also improved my creativity and design skills. I learned how to use templates, icons, and layout tools effectively.

This task helped me understand that visual communication is an important part of digital literacy. Infographics make information easier to understand and more engaging.

Task 2: Digital Portfolio

For Task 2, I created profiles on GitHub, LinkedIn, and Kaggle. These platforms help students build a professional digital presence.

GitHub is used to store projects and collaborate with others. LinkedIn is a professional networking platform that helps connect with professionals and recruiters. Kaggle is useful for learning data science and working with datasets.

I added my profile photo, bio, and basic academic details to make my profiles professional. I also created a special GitHub repository named after my username and added a profile README.

This task helped me understand the importance of maintaining a professional online presence and building a digital portfolio from the first year.

Task 3: Platforms Exploration

For Task 3, I explored coding platforms and created a Google Form. I created an account on HackerRank and solved beginner-level coding problems. This helped me improve my logical thinking and problem-solving skills.

I also created a Google Form with five questions related to digital literacy awareness. The form included multiple-choice questions and a short-answer question. This helped me learn how to collect responses and analyse information.

This task helped me understand how digital platforms support learning and skill development.

Task 4: Email Etiquette

In this task, I learned about professional email communication. I identified a poor email example and corrected it using proper email etiquette.

I also drafted two professional emails:

- Email to professor requesting extension
- Internship inquiry email

Additionally, I created a social media Do's and Don'ts checklist. This helped me understand responsible digital communication and online professionalism.

Task 5: Cybercrime Awareness

For Task 5, I researched cybercrime and created a case study on phishing attacks. Phishing is a type of cybercrime where attackers trick users into sharing personal information.

I also created a prevention checklist that includes:

- Use strong passwords
- Enable two-factor authentication
- Avoid suspicious links
- Verify sources

This task helped me understand the importance of cybersecurity and online safety.

Reflection

This project helped me improve my digital literacy skills. I learned how to create digital content, build professional profiles, and communicate effectively online. I also gained awareness about cybercrime and online safety.

These skills will help me in my academic journey and future career. Overall, this project was a valuable learning experience.

Conclusion

Digital literacy is essential in today's digital world. Through this project, I developed skills related to digital communication, cybersecurity, and professional portfolio creation. These skills will help me in academics and future professional growth. The project also improved my confidence in using digital tools.
